

Newsflash: First edition limited issue MWX004 interconnects on offer to best applications – apply at Junkosha booth at European Microwave Week

European Microwave Week stand number: Booth 2215

Global interconnects manufacturer Junkosha has chosen to make attendees at European Microwave Week the first to experience their newest interconnects designed to take systems beyond the 120 GHz barrier. Geared to match the needs of applications fit for a 5G world, three of the initial MWX004 samples to be produced will be available for immediate assignment – details at the stand.

“With this latest mmWave interconnect, Junkosha is meeting the needs of customer groups who are moving towards upgrading their equipment to contend with the higher frequencies demanded by a 5G enabled world and beyond,” explains Masaru Omoto, Product Manager for Junkosha. “Featuring characteristics including advanced phase stability, the highest performing dielectric material and high flex life thanks to Junkosha’s precision engineered expanded-PTFE tape wrapping technology, this new interconnect continues to push the boundaries beyond today’s needs to those of tomorrow, and a future that is connected far beyond the devices of today.”

The 22nd European Microwave Week is the largest trade show dedicated to microwaves and RF in Europe. Including in excess of 300 international exhibitors, the event provides visitors with an opportunity to review and discuss next generation technology developments with relevant and interested parties such as academics, professionals and leading industry figureheads. It also offers a forum for discussing trends and exchanging scientific and technical information. The event is being held at the Porte de Versailles in Paris, France, from 29th September to 4th October. For more information, click on <http://www.eumweek.com/>.

About Junkosha

Junkosha are pioneers of sophisticated fluoropolymer application technologies across many sectors including microwave interconnect and medical devices. With three operations in Japan, including its headquarters as well as sites in the US, UK and China, it is one of the best kept advanced technology secrets outside of Japan. The company provides wire and cable products, including microwave interconnects, robot cables, high data rate cables, camera link cable assemblies, ultrafine coaxial cables and assemblies, cables for clean environments, and general wires and cables. It also provides tube and fitting products, including generic resin tubes, fluoropolymer tubes, high-barrier tubes, flexible multi-layered tubes, industrial hoses, degassing modules, heat-shrinkable tubes, and the market leading peelable heat shrink tubes.
